

Crest Advisory Africa

Automated Premises Access and Health Screening

For governments around the world to manage the return to economic life following from health pandemic, they provide guidelines to companies to comply with to enable a controlled economic re-engagement of people and business and public sector. These screening and access logging solutions provide a means for companies to record, monitor and report on these compliance guidelines.

Temperature Thermal With Face Recognition Screening Terminal Screening Device

Realtime mask recognition

Record photos of visitors

Product Features

Integration of face capture, comparison function infrared temperature measurement function

Support living face detection effective prevention of photos and video spoofing

Industrial grade design pitch angle, left and right rotation adjustable

Non-contact temperature within one second detection distance 25-40cm, temperature error range $\pm 0.5^{\circ}\text{C}$, abnormal temperature linkage acousto-optic alarm

Support the output of real-time video stream to other device one complete face capture, recognition, infrared temperature detection function

Face database 10,000 pictures flexible face template import, support single, batch image file import and real-time capture import

Temperature Thermal With Face Recognition Screening Terminal Screening Device

Specifications	Screening Device
Thermometer range	34°C - 42°C
Thermometer accuracy	$\pm 0.4^{\circ}\text{C}$
Sample time	<1 second
Sample distance	25 - 45cm
Embedded Linux OS	✓
Face detection & recognition	✓
100 000 face library, voice and WiFi communications	✓
ID/ IC Card reader optional	Optional
Alarm Output/ Wagen Output (access control)	✓
4g/ WiFi GPS	Optional
Dimensions	7 inch, full-angle IPS LCD screen
Resolution	1280x720

Proposed Rollout Screening Process

Covid-19
